

BALLASTED POWER PEAK™

Weight: 0.00kg

Dimensions: 0.00cm x 0.00cm x 0.00cm

Description

The **BALLASTED POWER PEAK™** system is designed for project sites with unfavorable soil or ground conditions that prohibit pile driving. Each Ballasted Power Peak system is engineered to site-specific environments and arrives on the project site ready to assemble on precast or poured-in-place concrete bases. PV modules are mounted in a two-row portrait configuration where the number of modules in each row match the string size for easier and more efficient wire management.

The **BALLASTED POWER PEAK** system features bottom access PV module clamping which eliminates the need for ladders. The module clamps are preassembled with no loose parts for faster installation rates and code-compliant integrated electric bonding.

The **BALLASTED POWER PEAK** system features C-Channel verticals with adjustable bases that allow for uneven ballast blocks and terrain changes. Multiple vertical and horizontal slots and adjustments allow the table tops to be quickly squared, resulting in faster PV module placement and a professional finish.
