THERMOLIGN®

August 2017

History of THERMOLIGN® Hardware at PLP

Prefomed Line Products has been involved with the design, testing and production of hardware and accessories for High Temperature Low Sag Conductors (HTLS) since 1999.

PLP registered the brand name THERMOLIGN to represent products that are intended for use on new HTLS conductor technologies that have maximum continuous operating temperatures ranging from 180° C to 250° C.

THERMOLIGN products have been designed and thoroughly tested both in the laboratory and in the field to meet the unique requirements of high temperature operation while still providing a service life of 40 to 50 years.

Since 1947, PLP has been recognized as a leader in providing innovative solutions to protect overhead line conductors from wind and ice related forces and dynamic stresses. The unique nature of the materials used in the core of many of the HTLS conductors require the extra protection provided by the THERMOLIGN hardware designs.

Both in the U.S. World Headquarters and subsidiaries throughout the world, PLP has experienced engineering personnel and world class laboratory facilities to assure that the THERMOLIGN products meet industry specifications and the special requirements for high temperature operation.

ACCC® Mini-Catalog: Table of Contents

THERMOLIGN® Products for ACCC® Conductors	II
THERMOLIGN® Products for ACCC® Conductors International	III
Section 1 – Suspension & Support Products	
AGS-200 Suspension	1-1
AGS-200 Suspension: Fittings.....	1-4
AGS-200 Suspension: Double.....	1-6
AGS-200 Support.....	1-10
AGS-200 Support: Double.....	1-13

PREFORMED LINE PRODUCTS

AGS-200 Suspension

NOMENCLATURE

Thermal Rating (Continuous) 200°C

AGS® Bolt, Washer, Lock Nut: Galvanized Steel.

AGS Strap: High-Strength Aluminum Alloy.

AGS Insert: An elastomer specifically formulated for resistance to ozone attack, weathering, extreme high and low temperature variations, and compression set. An aluminum alloy reinforcement is molded into the elastomer.

AGS Housing: High-Strength Aluminum Alloy Casting.

AGS Rods: Aluminum Alloy
Standard Armor Rods have dimensions which are different from AGS Rods and cannot be substituted.

Ball End Rod: Rod has a Ball End for non-EHV application. PARROT-BILL® ends are supplied for EHV application (345kV and above).

GENERAL RECOMMENDATIONS

The AGS-200 Suspension has passed the “Sequential Mechanical Testing of Conductor Designs with Composite Cores”, and has more than 60 years of proven performance. The unique design utilizing elastomer inserts and rods greatly reduces static and dynamic stresses on the conductor at supporting structures.

VERTICAL ULTIMATE STRENGTH. Refer to dimensional tables in this section.

SLIP LOAD. When initially installed, the AGS-200 Suspension Unit has a slip load of approximately 20% of the conductor RBS and approximately 10% of the EHS strands rated breaking strength (RBS) during unbalanced load conditions, but significantly higher loads can be expected after the unit has been in service for a period of time.

THERMAL RATING. The AGS-200 Suspension is designed for 200° C continuous conductor temperature.

LINE ANGLE. The maximum recommended line angle for a single support AGS-200 Unit is 30°. For angles between 30° and 60°, the AGS-200 Suspension: Double is recommended.

AGS-200 Suspension

DESIGN MODIFICATIONS

AGS-200 Suspension: PARROT-BILL® Ends

To meet the corona onset and RIV requirements for most extra-high-voltage applications (345kV and above), PARROT-BILL Ends are to be used instead of the standard ball-end rods.

For use on ACCC® Conductor

AGS HARDWARE and FITTINGS

PLP offers a complete line of fittings designed for use with the AGS-200 Suspension. See this section for details.

Shown below is the Clevis Eye (1), Y Clevis Eye (2), Socket Eye (3), Hold-Down Weight Shackle (4), Vertical Bundling Link Assembly (5), Yoke Plate (6), and Socket Clevis (7).

AGS-200 Suspension: Fittings

Hold Down Weight Shackles*

Hughes Brothers, Inc.

ORDERING INSTRUCTIONS

For: Hold-Down Weight Shackles

Order directly from: **Hughes Brothers, Inc.**
 210 North 13th Street
 P.O. Box 191
 Seward, Nebraska 68424
 Telephone: (402) 643-2991

Price and delivery information available from Hughes Brothers, Inc., upon request.

AGS-200 Support

NOMENCLATURE

Thermal Rating (Continuous) 200°C

AGS-200 Support Keeper: Aluminum alloy casting. Comprises the top half of the AGS-200 Support housing unit. The conductor range is cast on the outside of the Keeper.

AGS-200 Support Body: Ductile iron casting. Comprises the bottom half of the AGS-200 Support housing unit. The conductor range is cast into the inside of the body.

AGS-200 Cap Screws and Lock Washers: Galvanized steel.

AGS-200 Support Inserts: An elastomer specifically formulated for resistance to ozone attack, weathering, extreme high and low temperature variations, and compression set. An aluminum alloy reinforcement is molded into the elastomer. The conductor range is molded into the inside of each insert.

AGS-200 Support Rods: Aluminum alloy for aluminum based conductor diameter range .482" to 1.828". Standard rod ends are supplied for sub-EHV applications and PARROT-BILL® rod ends are supplied for EHV applications.

Color Code: Identifies conductor diameter range.

Center Mark: Identifies starting location and center of rods during installation.

Identification Tag: Identifies rod material, conductor type and diameter range.

Special Note about Conductor Range: Each AGS-200 Support housing unit has a wide conductor range and is an overlapping design that incorporates several different pairs of inserts and sets of rods. Each pair of inserts has a narrow conductor range and will accommodate a few different sets of rods. Each set of rods has a very narrow conductor range and is designed for use only on the size conductor listed on the ID tag.

AGS-200 Support

GENERAL RECOMMENDATIONS

AGS-200 Support is intended for use on ACCC® conductors and is designed to be used with clamp-top horizontal and vertical line post insulators.

The AGS-200 Support is designed to reduce static and dynamic stress at the support point, so that the conductor is better able to withstand the effects of vibration than with armor-clamp attachments. It also helps protect the conductor against flashover in the support area.

While AGS-200 Support provides improved protection against vibration fatigue of the conductor, on some lines vibration may be so severe that the use of vibration dampers may be necessary. Utilities that have experienced vibration or expect to should consider adding dampers. Consult PLP for general guidelines and recommendations concerning vibration and dampers.

Unbalanced Loading. The AGS-200 Support will withstand an unbalanced load of approximately 10 to 20% of the conductor RBS before initial slip occurs. Slightly higher unbalanced loads will be obtained after the unit has been in service for a period of time.

Mechanical Strength. The AGS-200 Support will withstand a pull-off load from the trunnion pins of the insulator cap of 5,000 lbs. applied in any direction. This includes the vertical up direction so that the unit will withstand an uplift load. Since the bore of the unit is symmetrical throughout the entire 360° range, a radial conductor load may be applied safely in any direction.

Line Angles. A maximum line angle of 30° may be turned using a single AGS-200 Support, and a maximum of 60° using a Double-Support unit.

AGS-200 Support Double: A special AGS-200 Support is available for applications utilizing a double support. The minimum distance between the double support points is listed on the next page. Contact PLP for an engineering recommendation and additional information when considering use of the Double-Support unit.

Loading Consideration. In the work of line design, the cantilever strength of the insulator may be the governing factor, rather than the strength rating of the AGS-200 Support for unbalanced loading, mechanical strength, and turning angles.

Unusual Line Conditions. The AGS-200 Support may be rotated vertically on the trunnion pins a maximum of 15° before the bottom of the unit interferes with the insulator cap. This should be considered for those terrain conditions, such as a steep side hill, which might result in the unit being installed at an angle from the horizontal.

For use on ACCC® Conductor

AGS-200 Support: Double

DIMENSIONAL DATA

Minimum distances between support points are listed. Field conditions may require greater distances, which will require longer rods. All Double AGS-200 Support applications are supplied and engineered on a special order basis to insure proper rod length and performance.

CLAMP TOP TRUNNION

To insure proper fit and service life, it is recommended that only line post insulators with clamp top trunnion caps that conform to ANSI standards be used. See the illustration on the right for nominal cap dimensions that illustrate ANSI standards that have been established outlining the permissible dimensions and tolerances for trunnion caps. Consult the insulator manufacturer when in doubt about insulator standards.

The above dimensions are approximates for design information. Consult ANSI specification C29.7-1977 for exact dimensions.

CGS-200 Suspension

NOMENCLATURE

Jumper Loop Applications

GENERAL RECOMMENDATIONS

CGS-200 Suspensions are intended for use on ACCC® conductors for span lengths up to 450 feet or in Jumper Loop Applications. The conductor is cushioned by field proven integral elastomer inserts which guard against abrasion, wear and fatigue.

Features and Benefits:

- The CGS-200 Suspension is shipped assembled with no loose parts. All fasteners are factory installed to eliminate lost hardware in the field.
- Labor Savings – To install the CGS-200 Suspension, simply spread the body halves, place over the conductor, and tighten bolts.
- Integral Cushions – minimize conductor bending stresses at critical entry locations.
- Compatible with standard attachment hardware.
- Designed for EHV applications – corona free in bundled 345kV applications.
- Easy Hot Stick application – Lower captive fasteners act as hinge to facilitate hot stick application.

VERTICAL ULTIMATE LOAD. The vertical ultimate load of the CGS-200 Suspension is listed in the table on the next page.

SLIP LOAD. When initially installed, the CGS-200 Suspension has a slip load that ranges between 10% to 15% of the conductor's rated breaking strength (RBS).

LINE ANGLE. The maximum recommended line angle for a CGS-200 Suspension is 30° as a single suspension and 60° in a double configuration utilizing a yoke plate.

*Can be supplied with a bolt/nut/cotter in place of the suspension pin and cotter.

Thermal Rating (Continuous) 200°C

CGS-200 Support

NOMENCLATURE

Jumper Loop Applications

GENERAL RECOMMENDATIONS

The CGS-200 Support is intended for use on ACCC® conductors, and is designed to reduce the static and dynamic stresses at the support point, so that the conductor is protected against the effects of oscillations. The conductor is cushioned by field proven, integral elastomer inserts, which guard against abrasion, wear and fatigue.

Features and Benefits:

- The CGS-200 Support is shipped assembled. All fasteners are captivated in the keeper.
- Labor Savings – To install the CGS-200 Support simply install the base, place the keeper over the conductor, and tighten bolts.
- Integral Cushions – minimize conductor bending stresses at critical entry locations.

VERTICAL ULTIMATE LOAD. The CGS-200 Support will withstand a pulloff load from the trunnion pins of the insulator cap of 5,000 lbs., applied in any direction. This includes the vertical up direction (uplift).

SLIP LOAD. When initially installed, the CGS-200 Support has a slip load that ranges between 10% to 15% of the conductor's rated breaking strength (RBS).

LINE ANGLE. The maximum recommended line angle for a CGS-200 Support is 30°.

Thermal Rating (Continuous) 200°C

ORDERING INFORMATION

CLAMP TOP TRUNNION

To insure proper fit and service life, it is recommended that only line post insulators with clamp top trunnion caps that conform to ANSI standards be used. See the illustration on the right for nominal cap dimensions that illustrate ANSI standards that have been established outlining the permissible dimensions and tolerances for trunnion caps. Consult the insulator manufacturer when in doubt about insulator standards.

The above dimensions are approximates for design information. Consult ANSI specification C29.7-1977 for exact dimensions.

Transmission Line String Hardware

GENERAL INFORMATION

Preformed Line Products manufactures string hardware components for a variety of suspension and dead-end applications. PLP provides all standard transmission line components for attachments to the tower, insulator and suspension unit, for a variety of load ratings and requirements. Please contact your local Preformed Line Products office for information about products in your country.

Twin Spacer – 200

GENERAL INFORMATION

The Twin Spacer – 200 is simple to install and is shipped fully assembled (no loose parts).

The break-away bolt provides a clear indication that the proper installation torque has been achieved (no special tools required).

Conductor Spacing is 18 inches (457 mm), but is also available in 13 inch (330 mm) spacing.

Spacer Damper – 200

NOMENCLATURE

Thermal Rating 200°C Continuous

ORDERING INFORMATION

For standard 18" (457mm) sub-conductor spacing the catalog numbers are:

CGSDB-X45YZHT

Where X is 3 for Tri, 4 for Quad, 6 for Hex, and YZ is taken from the conductor range table below.

Example:

CGSDB-34529HT is a High Temperature Spacer Damper for a Tri Bundle of conductors within a diameter range of 1.107" to 1.146" (28-29 mm).

YZ	Conductor Range in (mm)
18	0.673-0.713 (17-18)
19	0.714-0.752 (18-19)
20	0.753-0.791 (19-20)
21	0.792-0.831 (20-21)
22	0.832-0.870 (21-22)
23	0.871-0.909 (22-23)
24	0.910-0.949 (23-24)
25	0.950-0.988 (24-25)
26	0.989-1.028 (25-26)
27	1.029-1.067 (26-27)
28	1.068-1.106 (27-28)
29	1.107-1.146 (28-29)
30	1.147-1.185 (29-30)
31	1.186-1.224 (30-31)

GENERAL INFORMATION

The Spacer Dampers – 200 for Tri and Quad feature elastomer damping elements engineered to absorb maximum energy. This design provides the greatest possible resistance to conductor fatigue by eliminating the need for additional vibration dampers.

UNIQUE DESIGNS

The Spacer Damper – 200 design was developed in cooperation with the Engineering Team at PLP-Brazil to meet the demanding requirements of IEC Specification 61854, while maintaining a light overall weight and exceptional performance.

PATENTED DAMPING ELEMENTS

The Spacer Damper – 200 design employs unique damping elements which are captured in a way which assures the elastomer is always in compression, providing maximum service life.

FIELD PROVEN

The Spacer Damper – 200 has been used extensively throughout Europe and Brazil since its introduction in the early 1990s, and the U.S. since 2004.

CLAMP FASTENER ASSURES PROPER INSTALLATION

A high strength 1/4 turn fastener is employed in the elastomer lined conductor clamp to insure proper installation. This design provides consistent compression of the elastomer liners without relying on specific bolt torque values or bolts with break-away heads.

If clamps with bolts or breakaway bolts are preferred, consult PLP for catalog numbers.

PLACEMENT IS THE KEY TO PERFORMANCE

PLP's extensive experience and laboratory and field testing allow it to provide you with placement recommendations that will minimize the motion of conductor bundles and maximize the longevity of the Spacer Damper.

Contact PLP for other sub-conductor spacings and configurations.

Vibration Damper

250°C when applied over AGS Rods or Protector Rods

Vibration Dampers meet the requirements of IEC-61897.

Vibration Dampers meet EHV corona requirements up to 500kV (Triple & Quad Bundle).

NOMENCLATURE

- 1. Clamp & Keeper:** The Clamp has an extruded hook shaped profile to hang onto the cable or conductor while tightening the keeper. Together, the aluminum keeper and clamp capture the conductor to hold the damper assembly firmly onto the conductor or cable. Product identification, installation torque, and lot number are permanently etched on the clamp.
- 2. Bolt, Washer, and Lock Washer:** The bolt, washer and lock washer are used to fasten the keeper to the clamp and secure the entire damper assembly to the cable or conductor. The materials used are galvanized steel. An optional break-away bolt version is available.
- 3. Large Damper Weight:** The Vibration damper design shown above has two weight sizes – this provides up to 4 resonant response frequencies (two for the large weight and two for the small weight) for more effective protection. The weight is a galvanized ductile iron casting.

Damper	Configuration	Corona Rating kV
VSD20	Single	200
VSD25	Single	200
VSD35	Single	260
	Twin	345
VSD40	Single	230
	Twin	345
	Tri	400
	Tri	400
	Quad	400
VSD50	Single	330
VSD55	Twin	400
	Twin	550

4. Small Damper Weight: The small weight provides damping at higher frequencies. The weight is a galvanized ductile iron casting.

5. Messenger: The messenger is made of formed hard steel wires that are galvanized for corrosion resistance.

GENERAL RECOMMENDATIONS

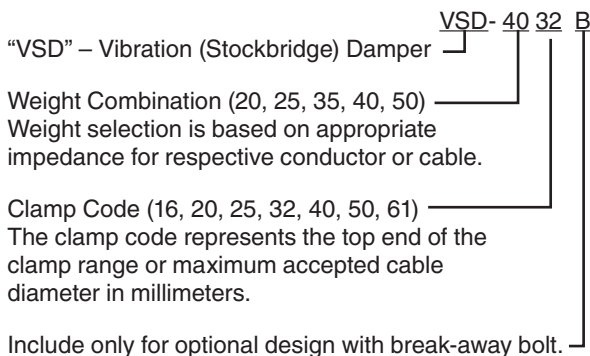

INTENDED USE: Vibration Dampers provide reduction of aeolian vibration amplitude and the associated dynamic stresses on the ACCC® conductor at the supporting hardware.

APPLICATION: Since ACCC® conductor has fully annealed aluminum strands, it is recommended that the Vibration Damper not be clamped directly on the conductor. For most applications, the Vibration Damper is placed on the AGS-200 Suspension Rods. In cases of Dead-end to Dead-end spans or for very long spans, it may be necessary to position the damper on the

conductor. For these situations, it is recommended that Protector Rods be applied to the conductor before installing the damper.

Placement: The VORTX placement software uses the results of extensive laboratory testing and the standing wave loop geometry for critical wind velocities to “optimize” the quantity and placement of dampers for the specific line and terrain conditions. Use the link www.plpvortex.com to get an input sheet to provide PLP with the data required to provide a complete placement recommendation.

Armor Rods

NOMENCLATURE

Rod Diameter: Added to conductor O.D., assists in arriving at applied overall diameter.

Rods Per Set: Indicate the proper number of rods for each application.

Center Mark: Establishes recommended alignment of rods during application.

Color Code and Length: Assist in identification of conductor size, corresponding to tabular information appearing on catalog page.

Identification Tape: Shows catalog number, nominal sizes.

**Thermal Rating (Continuous)
ACCC® Repair 200°C**

GENERAL RECOMMENDATIONS

Armor Rods are used to fully restore electrical conductivity and mechanical strength to a partially damaged ACCC® conductor. The damage must be limited to the aluminum strands and the number of broken or cracked strands must not exceed the “maximum number” listed in the table below. The strands can be broken or cracked in any of the layers as long as the total is less than or equal to the “maximum number” listed.

EHV versions with PARROT-BILL rod ends are available for larger diameter conductors typically used for application at 345kV and above.

Armor Rods: PARROT-BILL® Ends

For use on ACCC® Conductor

NOMENCLATURE

Sub-Sets: Individual rods assembled and gritted into groups (subsets), corresponding to tabular information appearing on catalog page.

Center Mark: Establishes recommended alignment of rods during application.

Color Code and Length: Assist in identification of conductor size, corresponding to tabular information appearing on catalog page.

Identification Tape: Shows catalog number, nominal sizes.

GENERAL RECOMMENDATIONS

Conductor Splices can be used on ACCC® conductor to repair damage to the Aluminum strands that exceeds the maximum number that can be repaired by Armor Rods.

Conductor Splices are capable of restoring the electrical conductivity of the conductor even if all of the aluminum strands have been broken or cracked. The composite core must be intact (undamaged).

EHV (345kV and above) versions of the conductor splices with PARROT-BILL rod ends are available for the larger conductors typically used for higher line voltages.

**Thermal Rating
200°C Continuous**

Splice/Dead-end Shunt

NOMENCLATURE

Thermal Rating (Continuous)
250°C

Subsets:

Individual rods assembled and gritted into groups (subsets), corresponding to tabular information appearing on catalog page.

Center Mark:

Establishes proper alignment of subsets centered on affected splice.

Color Code and Length:

Assists in identification of conductor size, corresponding to tabular information appearing on catalog page.

Identification Tape:

Shows catalog number, nominal sizes.

Application/Crossover Mark:

Indicates location where subsets wrap/apply on the conductor on either side of the splice.

GENERAL RECOMMENDATIONS

The Splice Shunt is designed to restore electrical conductivity and a portion of the mechanical strength to compression splices. The Dead-end Shunt restores electrical conductivity between the conductor in the span and the jumper loop. In addition to using

a Shunt for repair of faulty compression fittings, it can be used to reinforce and reduce the temperature of existing compression fittings for increasing the capacity (uprating) of a line.
