

Pipe Plug Bonding Kit

The PREFORMED™ Pipe Plug Bonding Kit, when applied with Shield Connectors, provides a low-resistance, non-fluctuating, high-current capacity bond and ground connection in cast iron and aluminum splice cases. Kit consists of heavy, flexible braid securely connected to a specially designed pipe plug. Braid is fed through plug hole and plug is securely tightened in place. Free end of braid is joined to cable sheath by Shield Connector. Additional braid is used to connect all cable sheaths to pipe plug, completing permanent bond and ground connection. Special pipe plug has a bright yellow tab to identify it as a ground connection.

Pipe Plug External Bond Kit

The "piggyback" Pipe Plug Bonding Kit is a specially designed adaptation of the External Bond Kit for plastic splice cases. An 18" #6 bonding braid and external bond ribbon mate at the "piggyback" plug, bringing cable shield bonds out of the plastic case and providing proper ground connection.
